

AUDIO/VIDEO COMPONENT NETWORKING SYSTEM AND METHOD

ABSTRACT OF THE DISCLOSURE

An audio/video (A/V) component networking system comprises a sink component adapted to present A/V program data to a user via a presentation device. The A/V component networking system also comprises a source component adapted to monitor presentation of the A/V program data via the presentation device by the sink component and automatically retrieve A/V program data related to the monitored A/V program data from an archival storage system in response to presentation of the monitored A/V program data.
